

Python backports on Ubuntu — September 2026

Package download statistics for the canonical-python-maintainers/python-backports PPA on Launchpad.

Reporting period	September 2026 (2026-09-01 to 2026-09-30, UTC)
Data window	2026-09-01 to 2026-09-07
Generated	2026-09-07 06:25:05 UTC
Origin	Backports PPA
Scope	python3.11, python3.12, python3.13, python3.14 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

Headline volume and the month's most material movements.

 **Partial month.** 7 of 7 days carry download counts (100%); the month is still in progress. Totals understate actual volume.

Downloads in month 787 vs August 2026: n/a	Average per day 112 over 7 days with data	Year on year n/a no comparable month	Peak day 384 2026-09-01
Leading version Python 3.12 83.5% of the month · 4 active versions	Newest version share 8.4% Python 3.14 · n/a	Dev per runtime download 0.47 developer-intent proxy · n/a	Lifetime to month end 787 cumulative since 2026-09-01

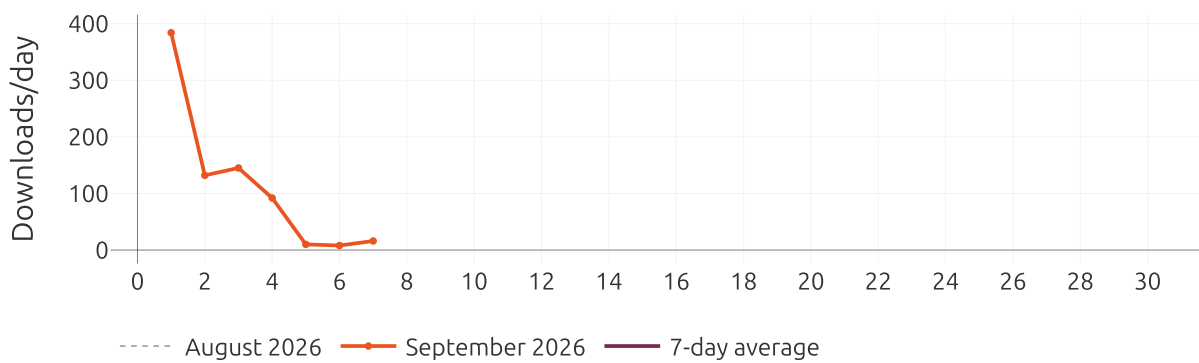

Key findings

- 787 downloads in September 2026 (112/day).
- Python 3.14 accounts for 8.4% of the month's downloads.
- Python 3.12 remains the most downloaded release at 83.5% of the month, across 4 active Python versions.
- Every runtime-only download came with 0.47 dev package downloads (174 dev vs 373 runtime) — a proxy for developer-side rather than deployment-side pull.
- Ubuntu resolute takes 50.7% of the month's downloads; LTS releases account for 49.3% in total.

Monthly downloads, last 1 months

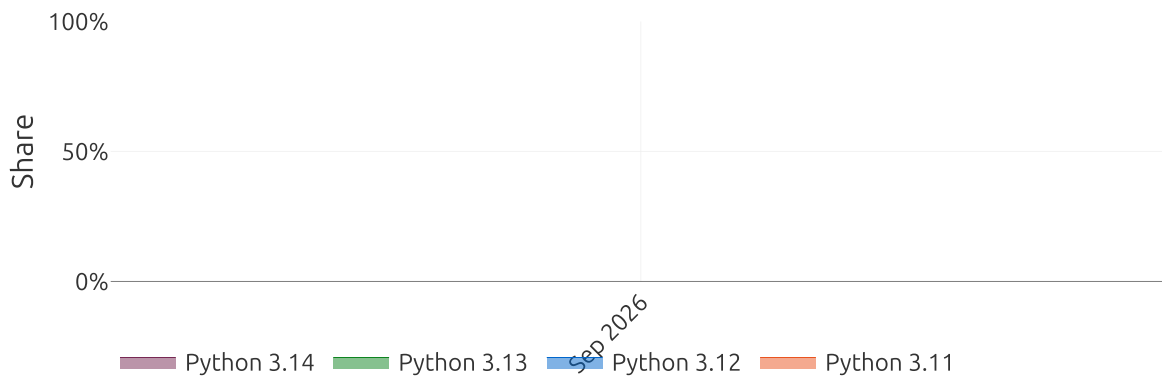

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which Python releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

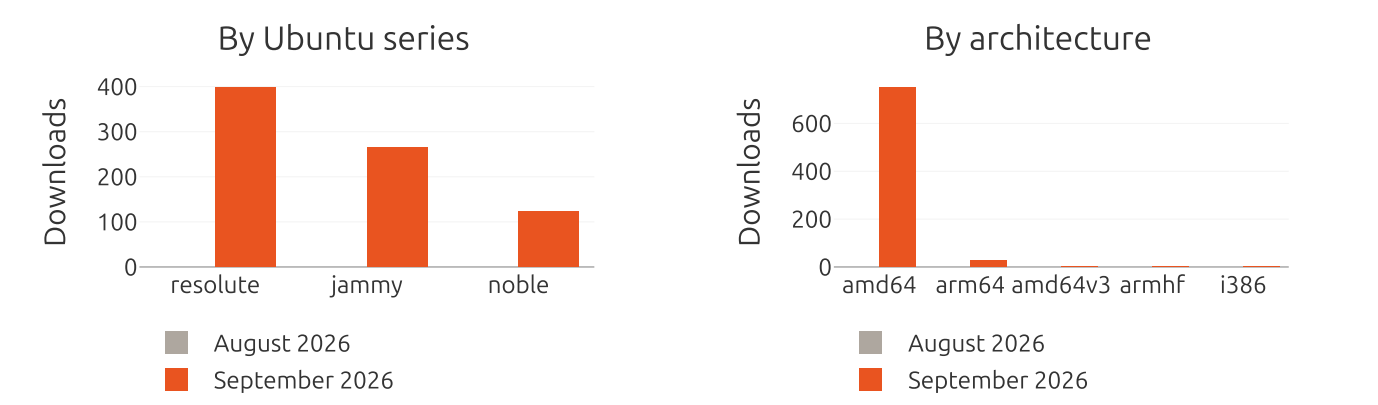

Share of downloads by Python version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
Python 3.12	657	83.5%	n/a	n/a
Python 3.14	66	8.4%	n/a	n/a
Python 3.13	53	6.7%	n/a	n/a
Python 3.11	11	1.4%	n/a	n/a

Share change is in percentage points against August 2026.

Ubuntu series detail

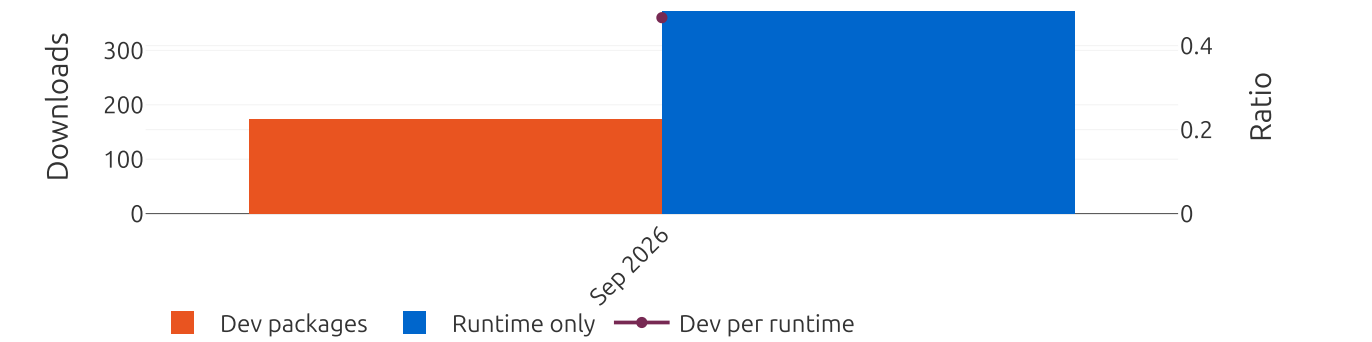

VALUE	DOWNLOADS	SHARE	AUGUST 2026	MOM
resolute	399	50.7%	0	n/a
jammy	265	33.7%	0	n/a
noble	123	15.6%	0	n/a

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 49.3% of the month, n/a on August 2026.

Architecture detail

VALUE	DOWNLOADS	SHARE	AUGUST 2026	MOM
amd64	752	95.6%	0	n/a
arm64	26	3.3%	0	n/a
amd64v3	4	0.5%	0	n/a
armhf	1	0.1%	0	n/a
i386	1	0.1%	0	n/a
ppc64el	1	0.1%	0	n/a
riscv64	1	0.1%	0	n/a
s390x	1	0.1%	0	n/a

Developer intent: dev versus runtime-only downloads

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
libpython3.12-minimal	other	101	n/a
libpython3.12-stdlib	stdlib	101	n/a
python3.12	runtime	101	n/a
python3.12-minimal	minimal	101	n/a
libpython3.12-dev	dev	87	n/a
libpython3.12t64	other	75	n/a
python3.12-dev	dev	75	n/a
python3.12-venv	venv	13	n/a
libpython3.13-minimal	other	10	n/a
libpython3.13-stdlib	stdlib	10	n/a

Dev package downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
Python 3.11	11	n/a	n/a	-0.1	growing / stable
Python 3.12	657	n/a	n/a	-3.9	1 days
Python 3.13	53	n/a	n/a	-0.3	growing / stable
Python 3.14	66	n/a	n/a	-0.4	growing / stable

Windows end on 2026-09-30. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2026-09-01	384	2.0σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	30
Days expected in window	7
Days with download counts	7
Coverage	100.0%
Missing days	0
Gaps	none
Month fully elapsed in dataset	no
Publications active in month	59
Publications first seen in month	59
Collector last run	2026-09-07

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the canonical-python-maintainers/python-backports PPA only. The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total Python usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by `scripts/collect.py`; figures reproducible from `data/downloads.json` for month 2026-09.
